

Why Outsource?

Domestic Outsourcing is Good Business

By outsourcing your product assembly, wrapping, and packaging to Midwest based Peoria Production Solutions you can realize significant cost savings without sacrificing quality. Some may call that having your cake and eating it too. We just call it good business.

The Benefits of Outsourcing with Peoria Production Solutions

Save on the cost of labor

Outsourcing your assembly and packaging to Peoria Production Solutions is almost always less expensive than employing in-house staff. By outsourcing, you save money on payroll and avoid the costs associated with recruiting, training, and managing your own employees.

Outsourcing with us is also typically less expensive than contracting with a staffing agency. Agencies add a hefty mark-up for labor, and you still must pay for the cost of training and managing the contract employees placed in your facility.

Reduce direct and indirect costs

Working with Peoria Production Solutions enables you to save money on the specialized equipment, maintenance, materials, purchasing, quality control, and even the utilities that you would need to maintain if you handled your post-production tasks in-house.

As your valued business partner, we offer turnkey solutions, including assembly, wrapping, packaging, kitting, sewing, cutting, finishing, rework, salvage, and shipping. As a result, you can free up resources for other purposes, such as developing new products or marketing.

Avoid opportunity costs

Opportunity costs are the potential benefits that you may miss when choosing one alternative over another. Outsourcing your assembly, packaging, and other post-production tasks to Peoria Production Solutions allows you to pursue opportunities you may not be able to otherwise.

Rivian

A Case Study in Savings and Efficiency

Rivian – a producer of electric truck, vans, and SUVs – runs a state-of-the-art manufacturing facility in Normal, Illinois. As a relatively new start-up with a range of supply chain challenges, they had been investigating ways to have assembled components delivered directly to the production line.

In June of 2022, they approached Peoria Production Solutions for help with a specific challenge they had with the production of 125,000 EV delivery vans for Amazon.

At the time, Rivian workers were assembling cargo bay fans for the vans on-site just prior to installation.

The process had become a chokepoint and was slowing down the entire production line. They reached out to see if we had the capability to assemble the cargo fan and the workforce in place to ensure continuity of supply. The answer to both questions was yes.

After a series of trials with engineers from Rivian we were ready to go ahead with assembly. Currently, we are producing 90% of the total fan units needed for the Amazon van project.

As a value-added service, we are also purchasing the fan components for assembly at our facility - saving Rivian both time and money.

By outsourcing purchasing and assembly with Peoria Production Solutions, Rivian is saving approximately \$12 per fan unit (\$1,350,000 over the life of the project) and is assured of an uninterrupted supply pipeline.

As a not-for-profit company with a mission to provide jobs, not generate profits, Peoria Production Solutions is in a unique position to help our customers save money on contract assembly, packaging, kitting, sewing, and other production services. Contact us to discuss how we can help your company.

Hire Performance, Higher Standards

We take great pride in our reputation for efficiency, accuracy, and quality.
